IMPORTANT ANNOUNCEMENT

DECENTRALIZED EXCHANGE MIGRATION:

Introduction to VTBDex and to VTBCommunity Foundation

© 2022 · VTBCommunity Foundation. All Rights Reserved. · www.vtbcommunity.org

IMPORTANT ANNOUNCEMENT

It is with immense pleasure that we reach out to the community to announce the **successful migration of our decentralized exchange** to its final stage, the **VTBDex**. [www.vtbdex.com]

We also introduce the **new foundational structure**, **technicalities**, and **new frontiers** of our endeavours as an **integrative financial proposal**, the **VTBCommunity Foundation**.

2021 will go down in history as the **rebirth of the project**. The Foundation was aware earlier this year that the **entire system** needed to be **rebuilt from scratch**, as it was fundamentally impossible to try and save the old to make it look like the new.

So, we had no choices to **redo everything** and that is exactly what we did.

The new token system is now titled "**VTB**." Therefore, we will use the **VTBC** and **VTBT** terminology as the **dual-token root** to work with.

It is essential to emphasise that it is an entirely new project and that everything is completely different from past iterations.

WHITE PAPER

VTBDEX

The new **Decentralized Exchange** is now **VTBDex** and operates under the www.vtbdex.com domain with an **optimised infrastructure**, an **enhanced performance**, and an **extended e-wallet compatibility**.

VTBCOMMUNITY FOUNDATION

The new website for the **VTBCommunity Foundation** is located at www.vtbcommunity.org, and it comes with a completely **renovated technical document**, the VTBCommunity Project White Paper that is readily available for download at the foundation website.

**Note: The two websites are now the official websites of the Foundation. Additionally, all social media channels appropriately listed on such websites are in place as the Community's only official accounts. Anything that is not linked on the official websites is not and will never be considered as a part of the VTBCommunity Foundation.*

Please make sure to share these facts with other members of the community that you may be in touch with.

VTBSTORE

Furthermore, and working hand-in-hand with the Foundation, we are also pleased to present the **first element of the new ecosystem**, that being the **VTBStore** which can be accessed by going to www.vtbstore.com.

We will release an update to this new website portrayed with demo accounts with **actual registered merchants very soon**, but we wanted to **showcase the potential of the platform to the community** and display how it will look once it is fully deployed.

GES HOLDING

The **commercial ecosystem**, **GES Holding**, is a **Dubai, UAE corporation** that will manage the **VTB Cash Advance System** as it will manage the **cryptocurrency licensing** requirements that are necessary for the complete payment system and the **merchant program**, among other benefits and features yet to be announced.

GES Holding will virtually reside on the website www.gesholding.com and will provide reference to the **rest of the commercial divisions of the VTB services repertoire**.

© 2022 · VTBCommunity Foundation. All Rights Reserved. · www.vtbcommunity.org

The **VTBCommunity Foundation** (**VTB** – "*Validus Tutis Beneficium*" stands for "*Strong Secure Benefits*") is a non-profit entity established in **Gibraltar** in September of 2021 that offers a revolutionary financial assembly and predictable ecosystem developed as a bold response to the dynamically inflationary money mechanic. It will perpetuate the principal objective of providing **expectable economic value** and **unmatched stability** to its users based on temporality, capital injection, and transactional numericity.

In its **development stages**, the VTBCommunity Foundation has been through extended periods of complex restructuring and reassessment to **evolve its financial proposal**, ensuring **stability**, **scalability**, and **predictability**.

VTB COMMUNITY

STRONGER & *WISER*

It is the reason why the VTBCommunity Foundation has decided to perform a **complete overhaul** & **reestablishment** of its **solutions**, primarily considering our **community members' financial wellbeing** and, of course, staying **true to our core values** and overall **mission** as a non-profit entity with our distinctive **forward-thinking envisioning**.

IT IS ALSO IMPORTANT TO STATE THAT WE NOW HAVE A PROPRIETARY BLOCKCHAIN, THE ***VTB BLOCKCHAIN.***

*This fact is something that you will be able to read in our **White Paper**.*

VTBDEX
MIGRATION

As a **decentralized exchange**, the **VTBDex** is a **cryptocurrency exchange system** that sustains the performance of **dependable peer-to-peer transactions** that requires **no midway operator**. Furthermore, the VTBDex serves its users with multi-currency trading capabilities based on our **proprietary smart contract as a standalone arrangement**. In this final iteration of our smart contract, the VTBDex has **migrated its database** of both **users and transactions** to its definitive version, which has **come into effect** on the 29th of December of 2021.

There must be utmost clarity that no transactions or minimal data sets have been left behind in this migration, assuring every user's asset, historical data, e-wallet management, and any other pertinent operations with the most outstanding integrity. In short, every person who has bought HODLC through HODLDex continues to **have the same assets, holding their value**. In addition, the migration also offers **tremendous benefits to newcomers** and buyers alike, as the **new VTBCommunity Smart Contract** provides more reliable and predictable outcomes in its last iteration.

Asset migration between source and destination can be a complicated operation. We must minimize end-user downtime, and assets must be transferred as quickly as possible and in perfect order. Data is stored in multiple locations and formats, and while an asset migration is underway, end-user notification is also considered.

There is no double handling of data, meaning digital assets go directly from the previous ledger (HODLDex) to the destination (VTBDex), and all the transactions can be recalled simultaneously. Everything is automated, from start to finish, from initial scheduling to onward transmission of financial data where appropriate.

Our distributed architecture ensures that asset migration is maximized while minimizing downtime, if not eliminated.

VTB COMMUNITY

VTBDEX SUPPORT TEAM

A select group within **the VTBCommunity** has been **trained accordingly** to help **ease the way for other members of the community** to **comfortably migrate their portfolio to the VTBDex.** They will be available in the **official Telegram Channel of the VTBCommunity Foundation.** [*https://t.me/VTBCommunity*]

THIS IS A **NEW BEGINNING,**

AND WE MUST **RALLY TOGETHER**

TO **MAKE IT WORK.**

We are **beginning a new year** with an **entirely new project**. The past must stay behind, and we must all concentrate on making it work for the **wellbeing of the entire community**.

*As is always the case with new **digital technology** & **web development**, there might be **minor glitches** and a few things to **ameliorate**. Therefore, we **invite the community** to kindly **signal what needs to be corrected** and the **tech team** will **resolve the matter very quickly**.*

To build a business ecosystem around the VTB, we needed to ensure that we secured the Foundation and that the project (token) would be protected in time.

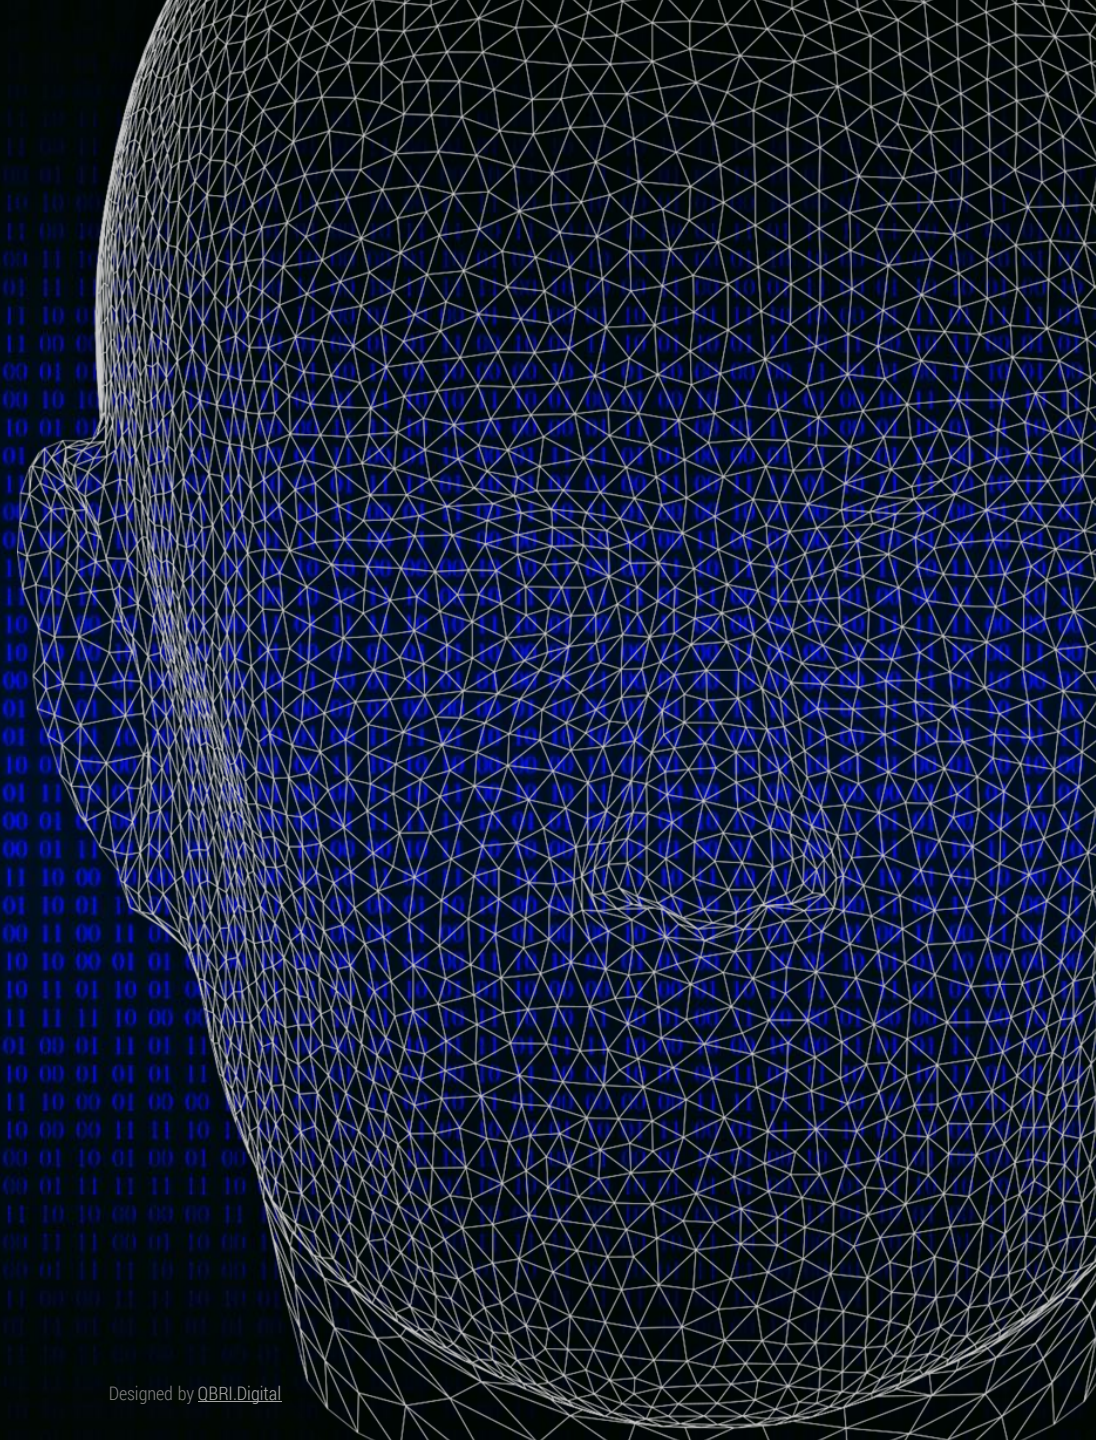

In the coming weeks, you will see announcements of the progress and the expected beginning dates of the different parts of that ecosystem.

THE VTB *BUSINESS ECOSYSTEM*

LET'S MAKE SURE THAT WHAT WE PRESENTED TODAY IS FINE-TUNED, AND THE REST WILL FOLLOW IN EARLY 2022.
